Appl. No. 10/517,180 Amdt. Dated April 21, 2009 Reply to Office action of January 21, 2009 Attorney Docket No. P16940-US1 EUS/J/P/09-3158

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- (Previously Presented) A method for routing a service request in a telecommunication system towards a destination user, the method comprising the steps of:
- a) storing a collection of identifiers related to a first identifier assigned to said user;
 - b) receiving a service request that comprises said first identifier;
- c) obtaining a plurality of identifiers among said collection of identifiers, the identifiers all equally usable for routing said service request:
 - d) selecting a second identifier among said plurality of identifiers; and
 - e) routing said service request according to said selected second identifier; wherein

at least one identifier among said plurality of identifiers stored in step a) has a format that comprises a user-name portion and a domain-name portion, wherein the user-name portion contains said first identifier; and

in step d) said second identifier is selected having a format comprising a username portion and a domain-name portion, wherein said user-name portion contains said first identifier.

- 2. (Original) The method of claim 1, wherein the step c) further comprises the steps of:
- c1) sending a query to a database that contains said collection of identifiers related to said first identifier, said query comprising the content of the first identifier;
- c2) receiving a response to said query that comprises a plurality of identifiers among said collection of identifiers.

Appl. No. 10/517,180 Amdt. Dated April 21, 2009 Reply to Office action of January 21, 2009 Attorney Docket No. P16940-US1 EUS/J/P/09-3158

 (Previously Presented) The method of claims 1, wherein said first identifier is a E.164 number and said second identifier is a Uniform Resource Locator for Session Initiation Protocol.

 (Currently Amended) The method of claim 3, wherein said second identifier contains said first identifier and number portability information.

(Canceled)

6. (Previously Presented) A system for routing a service request in a telecommunication system, the system comprising:

a data base, in charge of storing a collection of identifiers related to a first identifier associated to a user; and

a serving node of said telecommunication system in charge of receiving a service request towards a destination user and further routing said service request:

said data base being arranged to receive a query comprising the content of said first identifier, and to answer said query with a plurality of identifiers among said collection of identifiers, the plurality of identifiers all equally usable for routing said service request:

said serving node being arranged for querying said data base upon reception of a service request that comprises said first identifier, and further routing said service request according to an identifier selected among said plurality of identifiers:

wherein

said serving node is further arranged for routing said service request according to a second identifier selected from among said plurality of identifiers that has a format comprising a user-name portion and a domain-name portion, wherein said user-name portion contains said first identifier.

Appl. No. 10/517,180 Amdt. Dated April 21, 2009 Reply to Office action of January 21, 2009 Attorney Docket No. P16940-US1 EUS/J/P/09-3158

- (Original) The system of claim 6, wherein said first identifier is a E.164 number and said second identifier is a Uniform Resource Locator for Session Initiation Protocol.
- 8. (Currently Amended) The system of claim 7, wherein said wherein said second identifier contains <u>said first identifier and</u> number portability information.
